

multiSUB Tarak Seçenekleri

multiSUB Yatay Jel Çerçeveleri çok çeşitli döküm taraklarını barındırabilir. Standart seçenekler aşağıda gösterilmiştir, özel taraklar ise istek üzerine üretilebilir. Bir tarak seçmek için, tam sipariş kodunu almak için tarak kodunun sonuna istediğiniz kalınlığı eklemeniz yeterlidir, örneğin, MS7-8-1 1 mm kalınlığında bir tarak ve MS7-8-1.5 1.5 mm taraktır. Aşağıda gösterilen kuyu hacmi 1 mm kalınlığındaki taraklar içindir.

multiSUB için renk kodlu taraklar 4 kalınlıkta mevcuttur.

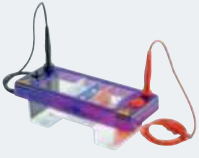

Siyah – Sıkıca çözölmüş bantlar için 0,75 mm

Kırmızı – Numune hacmini en üst düzeye çıkarmak için 1,5 mm

Beyaz – 1 mm standart olarak sağlanır **Blue** – Numune hacmini en üst düzeye çıkarmak için 2 mm

Yüksek çözünürlüklü jeller ve yayın kalitesinde veriler için önerilen siyah beyaz taraklar; Hazırlık teknikleri için nükleik asit hacimlerini büyütmek için kırmızı ve mavi.
